*direct & indirect Channel Manager interfaces ⓘ

The easybooking Channel Manager is connected via direct interfaces to the most important booking platforms such as Booking.com, Airbnb, the HRS Group (HRS, Tiscover and HRS Destinations), Expedia (with venere, hotels.com, trivago, travelocity), Intobis and Capcorn. Further platforms that are not directly connected to JULIA but to the respective destination management system are controlled via indirect interfaces. The data format iCalender (iCal) is used to exchange calendar information - in contrast to to the direct interface, however, there is no real-time comparison of the data, but a comparison of the actual state at defined times.
